INSTALLATION INSTRUCTIONS FOR
SENSOR ACTIVATED ETF-600/610 LAVATORY FAUCETS

Model ETF-600
24 VAC, Sensor Activated, 4" Centerset
Lavatory Faucet

Model ETF-610
24 VAC, Sensor Activated
Pedestal Lavatory Faucet

LIMITED WARRANTY
Sloan Valve Company warrants its ETF-600 and ETF-610 Faucets to be made of first class materials, free from defects of material or workmanship under normal use and to perform the service for which they are intended in a thoroughly reliable and efficient manner when properly installed and serviced, for a period of three (3) years (one (1) year for special finishes) from date of purchase. During this period, Sloan Valve Company will, at its option, repair or replace any part or parts which prove to be thus defective if returned to Sloan Valve Company, at customer’s cost, and this shall be the sole remedy available under this warranty. No claims will be allowed for labor, transportation or other incidental costs. This warranty extends only to persons or organizations who purchase Sloan Valve Company’s products directly from Sloan Valve Company for purpose of resale.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HEREOF. IN NO EVENT IS SLOAN VALVE COMPANY RESPONSIBLE FOR ANY CONSEQUENTIAL DAMAGES OF ANY MEASURE WHATSOEVER.

PRIOR TO INSTALLATION
Prior to installing the Sloan ETF-600 or ETF-610 Faucet, install the items listed below. Refer to Rough-in illustrations on Page 2.

• When Using Plug-In Transformer — Install electrical receptacle for plug-in transformer (120 VAC, 2 amp service for each ETF-233 (24 VAC, 35 VA) plug-in transformer used).
• When Using Box Mount Transformer — Install electrical wiring to transformer location (120 VAC, 2 amp service for each EL-248-40 (24 VAC, 40 VA) transformer used).
• Lavatory/sink
• Drain line
• Hot and cold water supply lines or tempered water supply line

Multiple Faucets
Multiple faucets can be powered by a single transformer, provided that the transformer has been properly sized. Allow a minimum of 15 VA of current rating for each solenoid valve used. Refer to “Step 4 — Install Transformer” for further information.

Mixing Valve
When installing the faucet with a Sloan mixing valve, these Installation Instructions AND the Installation Instructions packaged with the mixing valve MUST be followed.

Important:
• INSTALL ALL ELECTRICAL WIRING IN ACCORDANCE WITH NATIONAL/LOCAL CODES AND REGULATIONS.
• INSTALL ALL PLUMBING IN ACCORDANCE WITH APPLICABLE CODES AND REGULATIONS.
• A 24 VAC STEP-DOWN TRANSFORMER MUST BE USED.
• USE APPROPRIATE PRECAUTIONS WHILE CONNECTING TRANSFORMER TO 120 VAC POWER SOURCE.
• DO NOT PLUG TRANSFORMER INTO POWER SOURCE (RECEPTACLE) UNTIL ALL WIRING IS COMPLETED, ALLOWING 24 VAC TRANSFORMER WIRES TO TOUCH OR SHORT WHILE POWER IS BEING SUPPLIED WILL CAUSE PERMANENT DAMAGE TO THE TRANSFORMER AND CIRCUIT CONTROL MODULE.
• KEEP THREAD SEALANT OUT OF YOUR WATERWAY TO PREVENT COMPONENT PART DAMAGE! DO NOT USE ANY SEALANT ON COMPRESSION FITTINGS. FOR THREADED PIPE FITTINGS, DO NOT APPLY SEALANT TO THE FIRST TWO “STARTER” THREADS.
• FLUSH ALL WATER LINES UNTIL WATER IS CLEAR BEFORE CONNECTING SOLENOID TO SUPPLY STOPS.

DO NOT INSTALL THE SPRAY HEAD UNTIL AFTER THE SUPPLY LINES HAVE BEEN FLUSHED.

BAK-CHEK® TEE USAGE
When connecting the Sloan ETF-600 or ETF-610 Faucet to both hot and cold water supplies, a BAK-Chek® Tee is provided and required as illustrated in the Rough-in drawings on Page 2. Water temperature can be controlled by adjusting the supply stops.

When connecting the faucet to a single line water supply or a pre-tempered water supply, a BAK-Chek® Tee is not required. A BAK-Chek® Tee is not required or provided when a Temperature Mixing Valve is included with the faucet.

TOOLS REQUIRED FOR INSTALLATION
• Open end wrenches for hex sizes: 1", 5/8", 9/16", 1/2"
• Slotted screwdriver, 3/16"  • Basin wrench
• Slotted screwdriver (supplied)  • Phillips head screwdriver, #2
• Pliers
• Wire stripper/crimping tool
### 1A - INSTALL ETF-600 FAUCET

**A** Slide Base Gasket onto Faucet.

![Base Gasket](image)

**B** Insert Faucet Sensor Cable, Pipe Nipple, and Mounting Studs through the 4” (102 mm) spread deck holes.

![Faucet Sensor Cable](image)

**C** Secure Faucet to deck using Slotted Mounting Washers and Wing Nuts supplied.

![Securing Faucet](image)

**D** Apply thread sealant or Teflon tape to threads at end of Faucet Pipe Nipple. Install 1/8” Pipe x 3/8” Tube Compression Fitting on end of Faucet Pipe Nipple.

Note: Refer to the Installation Instructions included with the ETF-578-A Trim Plate for additional information about using an 8” Trim Plate with an ETF-600 faucet.
1B - INSTALL ETF-610 FAUCET

**Note:** Sloan Valve Company recommends that this faucet be installed with our trim plate. Our trim plate includes an anti-rotation feature to prevent rotary motion of this single-hole pedestal-style faucet.

A. Slide Base Gasket over Faucet Water Supply Tube and Sensor Cable. Install optional Trim Plate, then Trim Plate Gasket.

B. Holding Faucet Base Gasket and optional Trim Plate assembly in place, insert Sensor Cable and Faucet Water Supply Tube through the 1" (25 mm) center hole in deck or lavatory. Use plumber’s putty to secure optional Trim Plate.

C. Thread Sensor Cable through side of Mounting Spacer. Secure Faucet to deck or lavatory using Flat Washer, Lockwasher and Mounting Nut.

D. Apply thread sealant or Teflon tape to threads at end of Faucet Water Supply Tube. Install 1/4" Pipe x 3/8" Tube Compression Fitting on end of Faucet Water Supply Tube.

2 - INSTALL SOLENOID VALVE

**Note:** Flow direction of Solenoid Valve is indicated by arrow on Valve Body.

A. Connect 3/8" O.D. Supply Tube between Compression Fitting on outlet side of Solenoid Valve and Compression Fitting on Spout’s Pipe Nipple or Water Supply Tube.

B. For Dual Line Hot and Cold Water Supply Applications

   Install a 3/8 inch (10 mm) copper supply tube between Bak-Chek® Compression Tee and hot and cold supply stops. (Supply stops and copper supply tube furnished by installer.) Install a 3/8 inch (10 mm) copper supply tube between Bak-Chek® Compression Tee and inlet side of Solenoid Valve. Tighten Compression Fittings securely.

   **Note:** Failure to install the Bak-Chek® Tee can result in a cross flow connection when the faucet is off and the supply stops are open. If pressure of the hot and cold water supply differ, hot water can migrate into the cold water supply or vice-versa. Most plumbing codes require that the Bak-Chek® be used to prevent this.

C. For Single Line Water Supply Applications

   Install a 3/8 inch (10 mm) copper supply tube between the supply stop and inlet side of Solenoid Valve. (Supply stop and copper supply tube furnished by installer.) Tighten Compression Fittings securely.

   **Important:** Flush dirt, debris, and sediment from the supply line(s).

   **Important:** Keep thread sealant out of your waterway and prevent component part damage! Do not use sealant on compression fittings. When thread sealant is used, do not apply it to the first two “starter” threads.
Multiple Faucets

Multiple faucets can be powered by a single transformer that has been properly sized. Allow a minimum of 15 VA of current rating for each solenoid valve used. Refer to the following example to determine the required current rating for 3 OPTIMA faucets.

Example:

Total number of OPTIMA faucets: 3
Total number of solenoid valves: 3
Multiply by current rating: 15 VA

Minimum current rating of required transformer: 45 VA

Transformers Available with the ETF-600 and ETF-610 Faucets

Standard Plug-In † ETF-233 120 VAC 35 VA
Standard Box Mount EL-248-40 120 VAC 40 VA

† In Canada, use ETF-416 (120 VAC, 35 VA).

Optional Transformers Available from Sloan

All Sloan transformers are 50/60 Hz.
Other transformers (not supplied by Sloan) may be used, provided they meet UL requirements for Class 2 transformers.

---

4A - INSTALL BOX MOUNT TRANSFORMER

**Important:** DO NOT supply power to primary side of Transformer until all wiring has been completed.

Mount Transformer on a metal electrical junction box (supplied by others). (“J” box should be mounted inside chase wall or above ceiling.) Install Transformer within 50 feet (15.24 meters) of Faucet. 18 gauge wire is recommended.

A Run wires from secondary side of Transformer to 3/8 inch (10 mm) hole at back of Control Module Enclosure. If necessary, wires can be run through wall and then inserted through hole in back of Control Module Enclosure.

B Insert Poweder Cable and Strain Relief into hole at back of Control Module. Install right angle Strain Relief so that Powder Cable enters the Control Module from the bottom.

---

4B - INSTALL PLUG-IN TRANSFORMER

**Important:** DO NOT plug Transformer into receptacle until all wiring has been completed.

The Transformer is supplied with a 10 foot Cable; however, this Cable can and should be shortened to meet installation requirements.

A Strip ends of Transformer Power Cable approximately 3/16 to 1/4 inch (5 to 6 mm).

B Install Strain Relief 3 inches (76 mm) from one end of Power Cable.

C Insert Power Cable and Strain Relief into hole at back of Control Module. Install right angle Strain Relief so that Power Cable enters the Control Module from the bottom.

**Important:** Twist stranded ends of Power Cable before inserting into Terminal Block. Fraying of Stranded Power Cable Wire can cause a short and damage the Control Module and Transformer when powered.

D Connect Power Cable to Terminal Block on Connector Board. See Step 6.

E Install Crimp Connectors and connect Power Cable ends to Transformer Terminals.
5 - MOUNT CONTROL MODULE TO WALL

A. Install the Control Module in an appropriate location as shown in Rough-in. Control Module must be installed so that all cables enter from the bottom of the unit. When installed, Cables from the Spout and Solenoid Valve to the Control Module should have some slack.

B. Mount Control Module to wall using Mounting Screws and Plastic Anchors.

EXTENSION CABLES
Extension Cables are available as an option from Sloan to allow for installing the Control Module remote from the Faucet Spout and Solenoid Valve. Refer to the Parts List for available lengths.

6 - CONNECT CONTROL MODULE CONNECTIONS

A. Route Cables from Solenoid Valve and Spout to the Control Module.

B. Insert Solenoid Valve Connector into the Modular Receptacle on Connector Board.

C. Insert Locking Connector from Faucet Spout into mating Receptacle on Connector Board. Allow 3 to 4 inches (76 to 102 mm) of Cable to extend into the Control Module.

D. Insert each Conduit Cable into a strain relief slot in the Control Module.

7 - PLUG IN TRANSFORMER AND START-UP

A. Plug Transformer into 120 VAC Receptacle.

Note: The Control Module is equipped with two LED lights. When power is supplied by the Transformer, one LED will illuminate green. When Sensor is activated, this LED will change to red. A second red LED illuminates when Solenoid Valve is activated.

B. Open Supply Stop(s). With Aerator removed, activate Faucet for 30 seconds by placing hands in front of Sensor. The Solenoid Valve should “click” and water should flow from the Spout. If this does not occur, refer to the Troubleshooting section of this instruction instructions.

C. Close Supply Stop(s) and Install Spray Head in Spout using the Key provided. Reopen Supply Stop(s), activate Faucet and check for leaks.
8 - RANGE ADJUSTMENT

The OPTIMA ETF-600 and ETF-610 Faucets are factory set to operate when hands are placed 4 to 5 inches (102 to 127 mm) from Sensor. This range should be satisfactory for most installations.

If range adjustment is required, refer to the following range adjustment procedures.

TO MAKE A RANGE ADJUSTMENT

The Range Potentiometer and Dip Switches are located in Control Module.

Important: Range Potentiometer adjustment screw rotates only 3/4 of a turn; DO NOT over-rotate.

Make certain that Dip Switch number 4 is in the UP position. Using the small screwdriver provided, adjust Range Potentiometer clockwise until green (power ON) indicator LED turns red (Faucet is now picking up sink). Adjust Range Potentiometer back counterclockwise until red LED returns to green. Range is now at maximum.

Cycle Faucet several times to assure that range as adjusted will not inadvertently pick up IR reflection in lavatory. If IR reflection occurs (green LED will flicker red), adjust Range Potentiometer counterclockwise very slightly and again cycle Faucet.

Repeat range adjustment counterclockwise until length of range is at bowl rim of lavatory (plus or minus 1" (25 mm)).

Time Out Adjustment

The Faucet Time Out Setting determines the maximum time the Faucet will run upon continuous activation. This timing can be changed to meet individual application requirements.

Refer to Table 1 or label on cover of Control Module along with the following instructions to set the desired Time Out. The Dip Switches used to set the Time Out are located in the Control Module.

Set the Time Out by configuring the number 1, 2 and 3 Dip Switches as shown in Table 1.

CARE AND CLEANING OF CHROME AND SPECIAL FINISHES

DO NOT use abrasive or chemical cleaners (including chlorine bleach) to clean faucets that may dull the luster and attack the chrome or special decorative finishes. Use ONLY soap and water, then wipe dry with clean cloth or towel.

When cleaning the bathroom tile, protect the faucet from any splattering of cleaner. Acids and cleaning fluids will discolor or remove chrome plating.
Note: Remove Cover from Control Module to check diagnostic lights.

1. PROBLEM: No water is delivered when Faucet is activated.

   **INDICATOR:** If no LED lights illuminate:
   
   **CAUSE:** No electricity is being supplied to Faucet.
   
   **SOLUTION:** Ensure that the main power is turned “ON.” Check all Transformer, Sensor, Solenoid and Cable Connections. Make sure that Transformer is supplying 24 VAC (Volts AC). If no voltage is detected, replace Transformer.
   
   **CAUSE:** There is an electrical system malfunction.
   
   **SOLUTION:** Reset electrical system. Unplug Sensor Connection. Disconnect power to circuit for ten (10) seconds. Reconnect.
   
   **INDICATOR:** If the GREEN LED does NOT illuminate when power is reconnected:
   
   **CAUSE:** There is an electrical system malfunction.
   
   **SOLUTION:** Reset electrical system. Unplug Sensor Connection. Disconnect power to circuit for ten (10) seconds. Reconnect.
   
   **CAUSE:** The Control Module circuit is “dead.”
   
   **SOLUTION:** Replace ETF-450-A Control Module.
   
   **INDICATOR:** If GREEN LED illuminates AND changes to RED when hands are in the Sensor’s detection zone AND the RED Solenoid LED illuminates:
   
   **CAUSE:** Water supply stop(s) may be partially closed.
   
   **SOLUTION:** Open supply stop(s) completely.
   
   **CAUSE:** Debris is clogging Solenoid Filter.
   
   **SOLUTION:** Shut off water supply. Remove, clean and reinstall Solenoid Filter or Solenoid Valve repair kit ETF-1009-A.
   
   **CAUSE:** Solenoid is worn or faulty.
   
   **SOLUTION:** Rebuild with ETF-1009-A Solenoid Repair Kit or replace ETF-370-A Solenoid.
   
   **CAUSE:** Debris is clogging Faucet Aerator or Spray Head.
   
   **SOLUTION:** Shut off water. Remove Aerator or Spray Head (use Key if required). Clean and reinstall Aerator or Spray Head.

2. PROBLEM: Sensing Range is too short.

   **CAUSE:** Extended Range Sensitivity is required.
   
   **SOLUTION:** Dip Switch number 4 should be in the “DOWN” (Extended Range Sensitivity) position. Increase range by adjusting Range Potentiometer clockwise (yellow phillips screw in blue base).

3. PROBLEM: Faucet activates by itself (false triggers).

   **CAUSE:** Sensor range is set too long.
   
   **SOLUTION:** Decrease range by adjusting Range Potentiometer counterclockwise. If necessary, flip Dip Switch number 4 to the “UP” (Reduced Range Sensitivity) position. Check surroundings for factors that contribute to Sensor range detection problems (bright lights, highly reflective surfaces, sunlight, etc.).

4. PROBLEM: Faucet delivers very low flow or just a dribble.

   **CAUSE:** Water supply stop(s) may be partially closed.
   
   **SOLUTION:** Open supply stop(s) completely.
   
   **CAUSE:** Debris is clogging Solenoid Filter.
   
   **SOLUTION:** Shut off water. Remove, clean, and reinstall Solenoid Filter or install Solenoid Valve repair kit ETF-1009-A.
   
   **CAUSE:** Solenoid is worn or faulty.
   
   **SOLUTION:** Rebuild with ETF-1009-A Solenoid Repair Kit or replace ETF-370-A Solenoid.
   
   **CAUSE:** Debris is clogging Faucet Aerator or Spray Head.
   
   **SOLUTION:** Shut off water. Remove Aerator or Spray Head (use Key if required). Clean and reinstall Aerator or Spray Head.

5. PROBLEM: Faucet does not stop delivering water or continues to drip after user is no longer detected (even after power to the Module has been disconnected).

   **CAUSE:** Solenoid Valve is installed backward.
   
   **SOLUTION:** Disconnect Solenoid. Reconnect Solenoid with water flow toward the Faucet (see arrow on Solenoid).
   
   **CAUSE:** Debris is clogging Solenoid.
   
   **SOLUTION:** Remove and clean Solenoid Operator. If necessary, rebuild with ETF-1009-A Repair Kit.
   
   **CAUSE:** Seat in Solenoid Valve body is damaged or pitted.
   
   **SOLUTION:** Replace with ETF-370-A Solenoid.
