INSTALLATION INSTRUCTIONS FOR SENSOR ACTIVATED BATTERY POWERED FLUSHOMETER

LIMITED WARRANTY

Sloan Valve Company warrants its Sloan Optima Plus Flushometers to be made of first class materials, free from defects of material or workmanship under normal use and to perform the service for which they are intended in a thoroughly reliable and efficient manner when properly installed and serviced, for a period of three years (1 year for special finishes) from date of purchase. During this period, Sloan Valve Company will, at its option, repair or replace any part or parts which prove to be thus defective if returned to Sloan Valve Company, at customer's cost, and this shall be the sole remedy available under this warranty. No claims will be allowed for labor, transportation or other incidental costs. This warranty extends only to persons or organizations who purchase Sloan Valve Company's products directly from Sloan Valve Company for purpose of resale. This warranty does not cover the life of the batteries.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HEREOF. IN NO EVENT IS SLOAN VALVE COMPANY RESPONSIBLE FOR ANY CONSEQUENTIAL DAMAGES OF ANY MEASURE WHATSOEVER.

PRIOR TO INSTALLING THE SLOAN OPTIMA PLUS FLUSHOMETER

Prior to installing the Sloan Optima Plus Flushometer, install the items listed below as illustrated in the Rough-in Diagram. (New installations only.)

- Closet or Urinal fixture
- Drain line
- Water supply line

Important:
- INSTALL ALL PLUMBING IN ACCORDANCE WITH APPLICABLE CODES AND REGULATIONS.
- WATER SUPPLY LINES MUST BE SIZED TO PROVIDE AN ADEQUATE VOLUME OF WATER FOR EACH FIXTURE.
- WHEN INSTALLING A FLUSHOMETER, IT IS IMPORTANT THAT THE FLUSH MODEL MATCHES THE REQUIREMENTS OF THE PLUMBING FIXTURE.
- FLUSH ALL WATER LINES PRIOR TO MAKING CONNECTIONS.

The Sloan Optima Plus is designed to operate with 15 to 100 PSI (104 to 689 kPa) of water pressure. THE MINIMUM PRESSURE REQUIRED TO THE VALVE IS DETERMINED BY THE TYPE OF FIXTURE SELECTED. Consult fixture manufacturer for pressure requirements. Most Low Consumption water closets (1.6 gallon/6.0 liter) require a minimum flowing pressure of 25 psi (172 kPa).

TOOLS REQUIRED FOR INSTALLATION

- Slotted screwdriver to adjust control stop.
- Trimpot adjustment screwdriver (supplied) to adjust range, if necessary.
- Strap wrench (supplied) to install Optima Plus to valve body.
- 7/64" hex wrench (supplied) to secure Optima Plus cover to base plate.
When installing the Optima Plus in a handicap stall:
Per the ADA Guidelines (section 604.9.4) it is recommended that the grab bars be split or shifted to the wide side of the stall.

High Rough-in Water Closet Installation
Models 8113, 8115 & 8116

Model 8115 & 8116 valves are designed for installations where the water supply is roughed-in 24" - 27" (610 mm - 686 mm) above the top of the water closet.
For new installations, Sloan strongly recommends the use of our Model 8111 which has a shorter installation height.

<table>
<thead>
<tr>
<th>Model</th>
<th>“X”</th>
<th>“Y”</th>
</tr>
</thead>
<tbody>
<tr>
<td>8113</td>
<td>16” (406 mm)</td>
<td>21” (533 mm)</td>
</tr>
<tr>
<td>8115</td>
<td>24” (610 mm)</td>
<td>29” (737 mm)</td>
</tr>
<tr>
<td>8116</td>
<td>27” (686 mm)</td>
<td>32” (813 mm)</td>
</tr>
</tbody>
</table>

Use the Model 8113 when toilet seat with covers are being used.
Install Optional Sweat Solder Adapter (only if your supply pipe does not have a male thread).

1. Measure from finished wall to C/L of Fixture Spud. Cut pipe 1¼" (32 mm) shorter than this measurement. Chamfer O.D. and I.D. of water supply pipe.

2. Slide Threaded Adapter fully onto pipe.

3. Sweat solder the Adapter to pipe.

!!! IMPORTANT !!!

With the exception of Control Stop Inlet, DO NOT use pipe sealant or plumbing grease on any valve component or coupling!
2 Install Cover Tube, Wall Flange and Control Stop to supply pipe

A Measure from finished wall to first thread of Adapter or threaded supply pipe (dimension “X”). Cut Cover Tube to this length.

B Slide Cover Tube over pipe. Slide Wall Flange over Cover Tube until against wall.

C Thread Control Stop onto pipe. Tighten with a wrench.

D Tighten Set Screw with a 1/16” hex wrench. **DO NOT** install Vandal Resistant Stop Cap at this time.

3 Flush Out Supply Line

A Open Control Stop.

C **CLOCKWISE CLOSES CONTROL STOP**

**COUNTERCLOCKWISE OPENS CONTROL STOP**

B Turn on water supply to flush line of any debris or sediment.

C Close Control Stop.

4 Install Vacuum Breaker Flush Connection

**NOTE**

If cutting Vacuum Breaker Tube to size, note that Critical Line (C/L) on Vacuum Breaker must typically be 6” (152 mm) above fixture. Consult Code for details.

A Slide Spud Coupling, Nylon Slip Gasket, Rubber Gasket and Spud Flange over Vacuum Breaker Tube.

B Insert Tube into Fixture Spud.

C Hand tighten Spud Coupling onto Fixture Spud.

5 Install Flushometer

(Refer to Illustration in Step 5 — Continued, on Page 5)

A Lubricate tailpiece O-ring with water. Insert Adjustable Tailpiece into Control Stop. Tighten Tailpiece Coupling by hand.

B Align Flushometer directly above the Vacuum Breaker Flush Connection by sliding the Flushometer Body IN or OUT as needed. Tighten Vacuum Breaker Coupling by hand.

C Align Flushometer Body and securely tighten first the Tailpiece Coupling (1), then the Vacuum Breaker Coupling (2), and finally the Spud Coupling (3). Use a wrench to tighten these couplings in the order shown.

D Install Chrome Handle Cap with Gasket to handle opening on Flushometer Body. Tighten Chrome Handle Cap securely.
5 Install Flushometer — Continued

6 Assemble Flex Tube Diaphragm to Optima Plus Assembly

7 Tighten Locking Ring

8 Remove Tab to Activate Sensor Module

---

To facilitate installation, the O-ring on the diaphragm assembly must be wet for easier insertion.

**Note:** Sensor Lens must face directly forward. Rotating the Sensor to either side will decrease the Sensor's ability to detect a target.

---

Important: The Locking Ring must be installed down past the valve body threads by at least one thread. If difficulty is experienced installing the Locking Ring, turn the Locking Ring back and forth, each time working it further down the threads. The Locking Ring will act as a thread chaser in the event there has been a build-up of matter on the threads of the old valve body.
Test Sensor Operation

The Optima Plus has a factory set sensing range:
Water Closet Models - 22” to 42” (559 mm to 1067 mm)
Urinal Models - 15” to 30” (381 mm to 762 mm)

A Test Sensor with Cover in Place.

B Stand in front of Sensor for ten (10) seconds.

C Step away from Sensor and listen for “CLICK.”

Range Adjustment (Adjust only if Necessary)

The Optima Plus has a factory set sensing range:
Water Closet Models - 22” to 42” (559 mm to 1067 mm)
Urinal Models - 15” to 30” (381 mm to 762 mm)

The Factory setting should be satisfactory for most installations. If a range adjustment is required, refer to the Range Adjustment instructions on this page.

Operation

1. A continuous, INVISIBLE light beam is emitted from the Optima Plus Sensor.

2. As the user enters the beam's effective range, 22 to 42 inches (559 mm to 1067 mm) for closet installations and 15 to 30 inches (381 mm to 762 mm) for urinal installations, the beam is reflected into the Scanner Window to activate the Output Circuit. Once activated, the Output Circuit continues in a ‘hold’ mode for as long as the user remains within the effective range of the sensor.

3. When the user steps away, the loss of reflected light initiates an electrical “one-time” signal that activates the flushing cycle to flush the fixture. The Circuit automatically resets and is ready for the next user.

Adjust Control Stop and Install Vandal Resistant Stop Cap

A Open Control Stop COUNTERCLOCKWISE ½ turn from closed position.

B Activate Flushometer by placing hand in front of Optima Plus Sensor Lens for ten (10) seconds (or press override button) and then moving it away.

C Adjust Control Stop after each flush until the rate of flow delivered properly cleanses the fixture.

D For RESS retrofit applications, reuse Stop Cap from existing valve. In complete valve installations, a new Stop Cap is provided.

Important: The Sloan Flushometer is engineered for quiet operation. Excessive water flow creates noise, while too little water flow may not satisfy the needs of the fixture. Proper adjustment is made when plumbing fixture is cleansed after each flush without splashing water out from the lip AND a quiet flushing cycle is achieved.

Important: The Control Stop should never be opened to the point where the flow from the valve exceeds the flow capability of the fixture. In the event of a valve failure, the fixture must be able to accommodate a continuous flow from the valve.

Open Control Stop COUNTERCLOCKWISE ½ turn from closed position.

CLOCKWISE CLOSES
CONTROL STOP
COUNTERCLOCKWISE
OPENS CONTROL STOP

Refer to Illustration on Next Page.

Loosen the two Screws on top of the unit. Remove the Override Button. Remove the Rubber Plug from top of Electronic Sensor Module to uncover the Potentiometer.

RANGE ADJUSTMENT PROCEDURE

For the first ten (10) minutes of operation, a Visible Red Light flashes in the Sensing Window of the Optima Plus Flushometer when a user is detected. This Visible Red Light feature can be reactivated after ten (10) minutes by opening and closing the Battery Compartment Door.

Check the range by stepping toward the unit until the Red Light flashes, indicating the Sensor’s maximum detection limit. Adjust the Range Potentiometer Screw located on top of the Sensor Module a few degrees CLOCKWISE to increase the range or a few degrees COUNTERCLOCKWISE to decrease the range. Repeat this adjustment until the desired range is achieved.

Always Determine the Sensing Range with Plastic Cover and Lens Window On Top of the Unit.

(Continued on next page.)
Range Adjustment (Adjust only if Necessary) — Continued

**Important:** Adjust in small increments only! Range Potentiometer Adjustment Screw rotates only ¾ of a turn; **DO NOT** over-rotate.

When range adjustment is satisfactory, replace the Rubber Plug. Reinstall Override Button and tighten the two Screws on top of the unit.

---

**TROUBLESHOOTING GUIDE**

1. **Sensor Flashes Continuously Only When User Steps Within Range.**
   - A. Unit in Start-Up mode; no problem. This feature is active for the first ten (10) minutes of operation.

2. **Valve Does Not Flush; Sensor Not Picking Up User.**
   - A. Range too short; increase the range.

3. **Valve Does Not Flush; Sensor Picking Up Opposite Wall or Surface, or Only Flushes When Someone Walks By. Red Light Flashes Continuously for First 10 Minutes Even with No One in Front of the Sensor.**
   - A. Range too long; shorten range.

4. **Valve Does Not Flush Even After Adjustment.**
   - A. Range Adjustment Potentiometer set at full “max” or full “min” setting.
   - B. Batteries completely used up; replace batteries.
   - C. Problem with Electronic Sensor Module; replace Electronic Sensor Module.

5. **Unit flashes Four (4) Quick Times When User Steps Within Range.**
   - A. Batteries low; replace batteries.

6. **Valve Does Not Shut Off.**
   - A. Bypass Orifice in Diaphragm is clogged with dirt or debris, or Bypass is clogged by an invisible gelatinous film due to “over-treated” water.
   - B. Dirt or debris fouling Stem or Flex Tube Diaphragm. Remove Flex Tube Diaphragm and wash under running water.
   - C. O-ring on Stem of Flex Tube Diaphragm is damaged or worn. Replace O-ring if necessary.
   - D. Problem with Electronic Sensor Module; replace Sensor Module.

7. **Not Enough Water to Fixture.**
   - A. Wrong Flush Volume Regulator installed in Flex Tube Diaphragm Kit.
   - B. Control Stop not adjusted properly. Readjust Control Stop.
   - C. Wrong Optima Plus Diaphragm kit installed; i.e., 3.5 gpf. closet installed on 0.5 gal. urinal fixture. Replace with proper Optima Plus Diaphragm kit.

8. **Too Much Water to Fixture.**
   - A. Wrong Flush Volume Regulator installed in Flex Tube Diaphragm Kit.
   - B. Control Stop not adjusted properly. Readjust Control Stop.
   - C. Wrong Optima Plus Diaphragm Kit installed; i.e., 3.5 gpf. closet installed on 0.5 gal. urinal fixture. Replace with proper Optima Plus Diaphragm kit.
   - D. Dirt in Diaphragm Bypass. Clean under running water or replace Flex Tube Diaphragm.

---

**Battery Replacement**

When required, replace batteries with four (4) Alkaline AA-Size Batteries.

**Note:** Water does not have to be turned off to replace Batteries.

Loosen the two (2) Screws on top of unit. Remove the complete Cover Assembly. Lift the Sensor Module from its Plate. Unplug the Electrical Connector from Battery Compartment Cover. Loosen the Retaining Screw on Battery Compartment Cover and remove Battery Compartment Cover. Install four (4) Alkaline AA-Size Batteries exactly as illustrated.

Install Battery Compartment Cover and secure with Retaining Screw. Make certain that Battery Compartment Cover is fully compressed against Gasket to provide a seal; **Do Not** overtighten. Plug the Electrical Connector into the Battery Compartment Cover. Reinstall the Sensor Module onto the Plate. Reinstall the complete Cover Assembly onto the Plate. Tighten the two (2) Screws on top of the unit.

CARE AND CLEANING OF CHROME AND SPECIAL FINISHES

DO NOT use abrasive or chemical cleaners to clean Flushometers as they may dull the luster and attack the chrome or special decorative finishes. Use ONLY soap and water, then wipe dry with clean cloth or towel.

While cleaning the bathroom tile, the Flushometer should be protected from any splattering of cleaner. Acids and cleaning fluids can discolor or remove chrome plating.

Manufactured in the U.S.A. by Sloan Valve Company under one or more of the following patents: U.S. Patents: 4,893,039; 5,169,118; 5,244,179; 5,295,655; Des. 345,113; Des. 355,478. Other Patents Pending. BAK-CHEK®, PARA-FLO®, PERMEX®, TURBO-FLO®.

Flex Tube Diaphragm Assembly

Optima Plus Valve Models Feature Sloan's Exclusive Flex Tube Diaphragm™ for the ultimate in valve performance, reliability and Chloramine resistance.
