

Case Study / Corporate Office

## DPR Construction

DPR Construction (DPR) is one of the world's leading general contractors. DPR serves customers nationally and internationally through regional offices around the country. Ranked in the top 50 general contractors in the country since 1997, DPR is a national commercial contractor and construction manager that grows by delivering value to their customers.

### The Challenge

DPR was doing a makeover of their corporate offices in San Francisco, California. DPR commonly uses their washroom spaces as test labs for future installs and wanted to create a full washroom experience using only Sloan® products. The facility wanted the most current line products to be highlighted in their Net Zero Energy (NZE) space.

### The Solution

Ted van der Linden, Director of Sustainability for DPR, saw the Beta version of the AER-DEC™ Integrated Sink at Greenbuild and immediately thought the product was going to be a hit. He decided that AER-DEC would be a perfect solution to the space and allow DPR to test the AER-DEC sink while also creating a functional and clean design for their washroom needs.

### The Results

DPR installed four AER-DEC units in their offices. Two units were installed as part of a new washroom design and two were added in an existing washroom. After a smooth install van der Linden said, "These are super sleek, clean, and make great use of product. I liked the custom-nature of the design". Silestone® Blanco Maple was chosen as the finish for both basins to keep a clean look throughout both spaces.

According to van der Linden the product reviews have been great, with the aesthetics of the product matching its functionality for the end user. The unit also has lived up to its billing for being efficient, reducing water waste and saving on electricity costs. van der Linden said "I believe the AER-DEC will be a hit and it will be a productive tool on the market with its benefits to owners, designers, and end users alike".

**"I believe the AER-DEC will be a hit and it will be a productive tool on the market with its benefits to owners, designers, and end users alike"**

— Ted van der Linden, DPR Director of Sustainability
