

Upgrading to sensor in K-12 Facilities

Sensor-operated products are leading the way to the commercial restroom's future, as increased importance on hand hygiene has accelerated the need for touch-free products. As part of the Coronavirus Relief Stimulus Funding, there are several options for educational institutions to access funding to improve and update their restrooms with touch-free products, allowing students, faculty, and staff to return to a more hygienic and safer environment.

Best: Top-tier Option
